

artistify

User Manual

Aadit Mahajan and Anirudh Rao

Welcome to the user manual for the **artistify** web application. This document serves as a quick guide through the functionalities provided in this application.

Home Screen

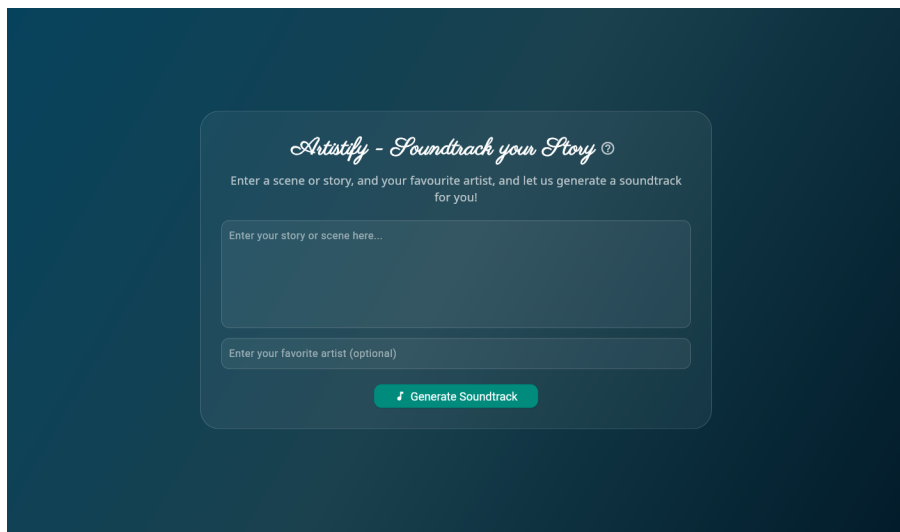

Figure 1: Home screen

This screen provides with two text boxes, one for the user to input a *Storyline* of their choice, and the other to input the name of an *Artist* of their choice.

The specification of an artist of choice is not necessary. On omitting this choice, the program chooses an artist from the [Top 100 Billboard artists](#), based on their current discographies and their style of music.

The question mark menu near the top right edge of the box also gives a quick set of instructions to guide you through the application.

Once done, hit generate soundtrack!

Loading Screen

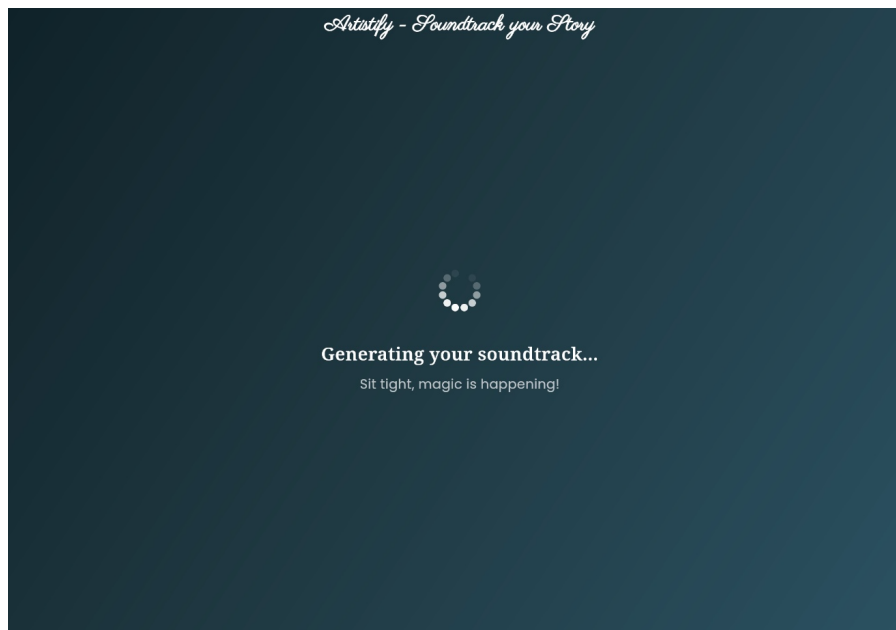

Figure 2: Loading Screen

In normal operational mode, when you specify the artist name, the loading screen should say "Customizing with artist", followed by artist of your choice. Otherwise, the loading screen gives the prompt "Sit tight, magic is happening!". Magic is really happening!

Results Screen

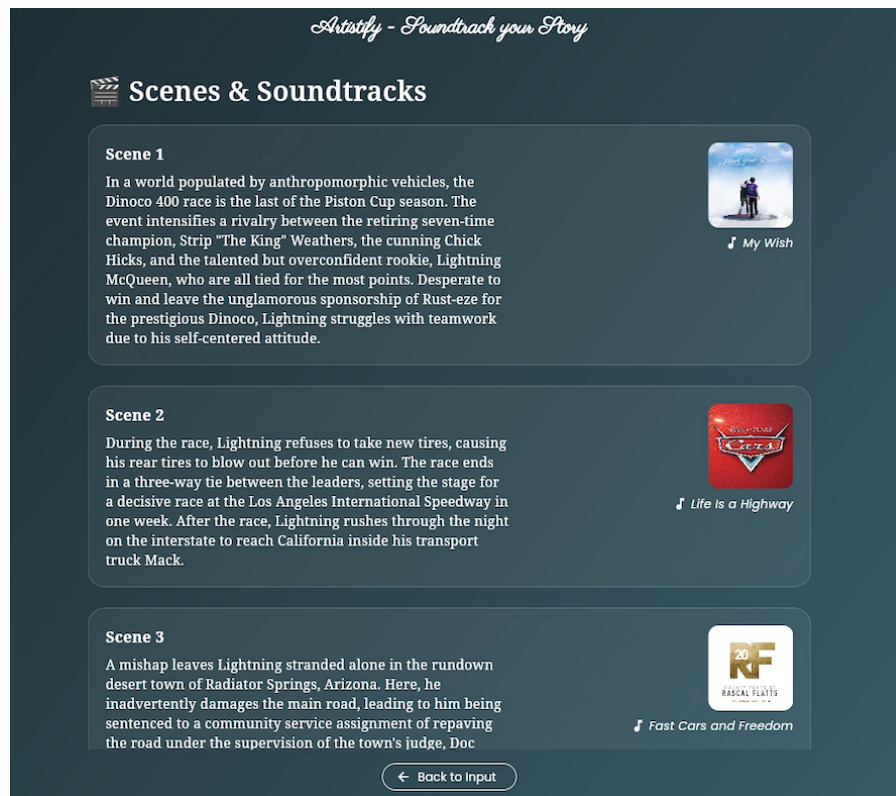

Figure 3: Results Screen

Once the program has come up with a set of suggestions for your storyline, the soundtrack will be displayed in the results screen. The format of the results screen follows a simple flow, with scenes displayed along with the recommended song-titles and their album/EP covers.

If you want to go back to the Home screen, simply click the "Back to input" button.

To close the application, simply close the tab on your browser in which the Web page is open!

Hope you have a good time!
